## CTD – Desktop Digital Signature Software

The ComsignTrust Desktop software is a desktop signature software that expands the use of Comsign's electronic signature and enables a digital signature on original documents directly from the user's workstation.

This software replaces the company seal or manual signature for all documents, such as **invoices, price proposals, purchase proposals, contracts, 101 form (employee card), payment orders for the bank, scanned documents, engineering drawings, receipts, tenders, and any other document that requires a signature.**

The software enables to sign a wide range of file types and documents, such as **PDF, Word, Excel, Tiff**, as well as sign all files in one library at once. In addition, the software allows automatic email delivery of the digitally signed files.

### Green

Digital signature on all types of documents in your organization

### Efficient

Sign all files in a library at once

### Fast

Send the digitally signed files over email

### Secure

Full control and overview of all signed documents within the organization

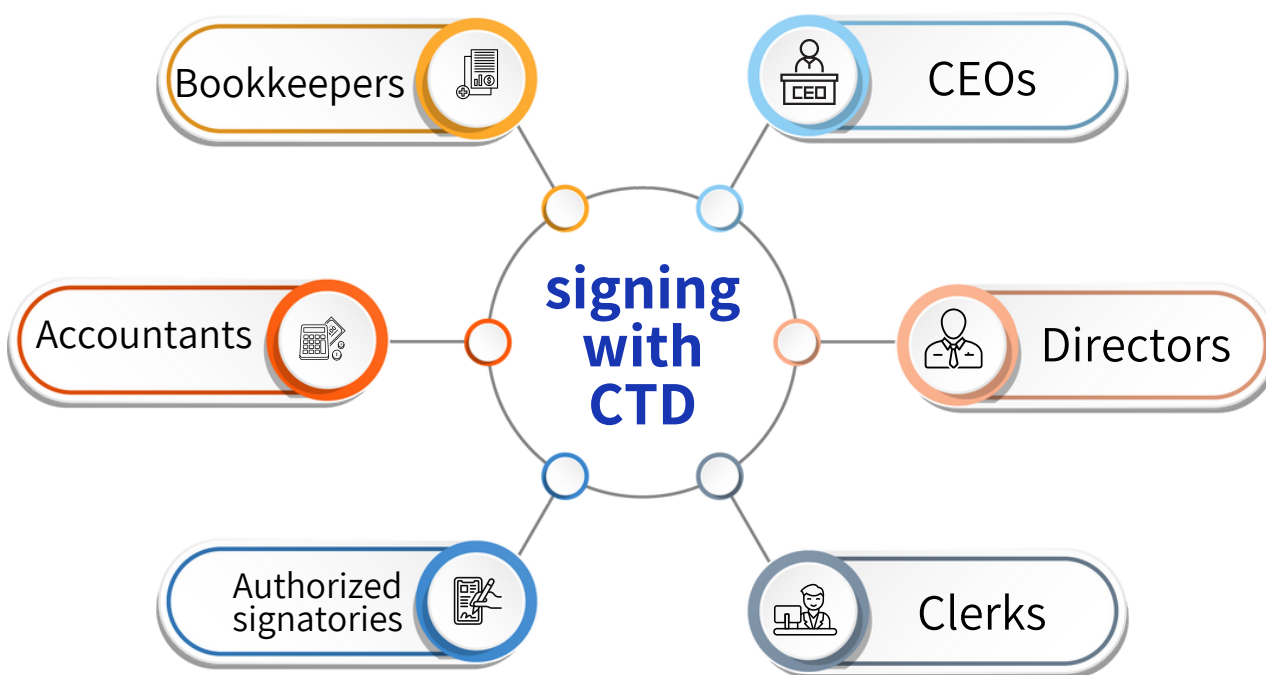

### Flexible

Integration into other internal software

# Who is the CTD software for?
